Corn Planted by Machinery A SUBSTITUTE for the slow and tedious process of planting corn has long been a desideratum; but until note the labored efforts of inventive genius has falled in its production, though years and much money have been spent to accomplish so great a piece of mechanism.

Some estimate of the importance of an invention that will materially facilitate the production of this great staple.

may be formed from the fact that in 1856 near 800 000 000 bushels were raised in the United States, exceeding in value all other grains, with the entire cotton crop in ad-The present universal method of planting this great crop is (after the ground is pinushed) by marking out the sur-face 8% or 4 feet apart each way, and in the angles thus tormed a man drops 4 or 5 kernels and covers with a hos at an expense of \$1 to \$1 25 per acre; but fellure of part and sometimes the whole crop results from the difficulty of obtaining sufficient force at the proper time in the spring to secure the planting at the most orilload provind. Practical men understand this energychers. Numerous vices and machines have been made, but failure ha tily resulted. A plan perfect in one respect was certain

s fall in suother, so as to render the whole worthless. No machine until now has been under to meet the universal demand of the farming interests in HILL, chick or angular planting, so as to enable him to cultivate with plough and horse-hoe the crop-both ways between the rows.
Drift planting is abandoned because of the impossibility of cultivation in but one direction. The long wished for machine has been invented and per fected by a young Scotchman, and is the result of three years unwearied efforts, parient investigation and the application of scientific and mechanical principles to accomplish a desired object. The device is entirely new, simple and beautiful, working autoreleafly and yet so incentously and naturally as most to appear the result of instinct.

What Whitney's great invention did for cotton this greatinvention will do for co: n, namely augment the quantity

No description could convey a c'ear idea of its peculi ar d simple mechanism, Brithout any Cods, Band, Pollies, Chares, Shapes, Spansos, Levess, or Grazing of any kind, with a horse, guided by a man or boy, this machine executes in a neat and perfect manner the following described work, being what is wanted by every farmet -- lat. And all this at a cost of 15 cents an acre by single machine, and 10 cents per acre by a double one.—10 acres being planted by the first, and 20 by the second, in one day, with no more force than a man and house.

We are aware these statements look familial to that large, sterentypes, old fogy class, who are about a quarter of sentury in the rear of this progressive age, land whose deas revolve in the oldslow quach train; but we assure all men autiquated gentlemen that ever s word is literal no. ted unadulerated truth, obvious, clear and distinct to the most obtuse intellect or the dullest comprehension, besides eing demonstrated by actual use on an extensive reale. IT ACTS UPON THE SKIN, Removing Morbid or Vitiated Humors, beautifying the face, kindling life and energy in your entire frame; then, reader, will the world no longer look dark and gloomy, no longer will your deamest hope be banished and thrust aside but with HKALTH AND SIRFIGTH.
